研究背景	The protein encoded by this gene is a member of the homeobox transcription factor family. Members of t his family contain a homeobox domain that consists of a 60-amino acid helix-turn-helix structure that bin ds DNA and RNA. The protein encoded by this gene is conserved across vertebrates and may play an ess ential role during development. Altered levels of this protein have been reported in cancers of different or gans, such as colon, brain, blood, breast, pancreas, liver and esophagus. Alternative splicing results in m ultiple transcript variants.
