研究背景	The product of this gene is a member of the receptor-interacting protein (RIP) family of serine/threonine p rotein kinases, and contains a C-terminal domain unique from other RIP family members. The encoded pr otein is predominantly localized to the cytoplasm, and can undergo nucleocytoplasmic shuttling depende nt on novel nuclear localization and export signals. It is a component of the tumor necrosis factor (TNF) re ceptor-l signaling complex, and can induce apoptosis and weakly activate the NF-kappaB transcription fa ctor.
