

β -Galactosidase

货号: **AYB26937**

β -Galactosidase

产品信息

生物活性	β -Galactosidase is a glycoside hydrolase that hydrolyzes the β -glycosidic bonds formed between galactose and its organic moieties. In <i>E.coli</i> , the <i>lacZ</i> gene is the structural gene of β -galactosidase, which can be used as part of the induction system lac operon. β -Galactosidase can hydrolyze lactose to form glucose and galactose, and enter glycolysis; it can also catalyze the transgalactosylation of lactose into allolactose; allolactose can be cracked into monosaccharides .
