

Ethylenediaminetetraacetic acid sodium hydrate

货号: **AYB27588**

产品信息

生物活性	Ethylenediaminetetraacetic acid (EDTA) sodium hydrate is a metal chelators (binds to metal divalent and trivalent cations including calcium), which shows activities of anticoagulant and anti-hypercalcemic. Ethyl enediaminetetraacetic acid sodium hydrate decreases the metal ion-catalyzed oxidative damage to prote ins, and allows maintenance of reducing environment during protein purification . Ethylenediaminetetr aacetic acid sodium hydrate can also decrease the formation of disulfide bonds.
