靶点信息

研究背景	This gene encodes a chromatin-associated enzyme, poly(ADP-ribosyl)transferase, which modifies various nuclear proteins by poly(ADP-ribosyl)ation. The modification is dependent on DNA and is involved in the r egulation of various important cellular processes such as differentiation, proliferation, and tumor transfor mation and also in the regulation of the molecular events involved in the recovery of cell from DNA dama ge. In addition, this enzyme may be the site of mutation in Fanconi anemia, and may participate in the pa thophysiology of type I diabetes.
