靶点信息

研究背景	The protein encoded by this gene, a member of the Wiskott-Aldrich syndrome protein (WASP)-family, play s a critical role downstream of Rac, a Rho-family small GTPase, in regulating the actin cytoskeleton requir ed for membrane ruffling. It has been shown to associate with an actin nucleation core Arp2/3 complex w hile enhancing actin polymerization in vitro. Wiskott-Aldrich syndrome is a disease of the immune system , likely due to defects in regulation of actin cytoskeleton. Multiple alternatively spliced transcript variants encoding the same protein have been found for this gene.
