研究背景	Tight junctions represent one mode of cell-to-cell adhesion in epithelial or endothelial cell sheets, forming continuous seals around cells and serving as a physical barrier to prevent solutes and water from passing freely through the paracellular space. The protein encoded by this immunoglobulin superfamily gene me mber is an important regulator of tight junction assembly in epithelia. In addition, the encoded protein ca n act as (1) a receptor for reovirus, (2) a ligand for the integrin LFA1, involved in leukocyte transmigratio n, and (3) a platelet receptor. Multiple 5' alternatively spliced variants, encoding the same protein, have b een identified but their biological validity has not been established.
