## 靶点信息

研究背景	This gene encodes a member of the IQGAP family. The encoded protein contains three IQ domains, one c alponin homology domain, one Ras-GAP domain and one WW domain. This protein interacts with compon ents of the cytoskeleton, with cell adhesion molecules, and with several signaling molecules to regulate c ell morphology and motility. It also acts as a tumor suppressor and has been found to play a role in regula ting innate antiviral responses. Alternative splicing results in multiple transcript variants.
