靶点信息

研究背景	This gene encodes a member of the Polycomb-group (PcG) family. PcG family members form multimeric p rotein complexes, which are involved in maintaining the transcriptional repressive state of genes over suc cessive cell generations. This protein associates with the embryonic ectoderm development protein, the VAV1 oncoprotein, and the X-linked nuclear protein. This protein may play a role in the hematopoietic and central nervous systems. Multiple alternatively splcied transcript variants encoding distinct isoforms have been identified for this gene.
