靶点信息

研究背景	This gene encodes the medium-chain specific (C4 to C12 straight chain) acyl-Coenzyme A dehydrogenase . The homotetramer enzyme catalyzes the initial step of the mitochondrial fatty acid beta-oxidation path way. Defects in this gene cause medium-chain acyl-CoA dehydrogenase deficiency, a disease characteriz ed by hepatic dysfunction, fasting hypoglycemia, and encephalopathy, which can result in infantile death. Alternatively spliced transcript variants encoding different isoforms have been found for this gene.
