研究背景	May function as a scaffold on which the coordinated assembly of proteins can occur. May play a role as a n adapter that, via its PDZ domain, localizes LIM-binding proteins to actin filaments of both skeletal muscl e and nonmuscle tissues. Involved in both of the two fundamental mechanisms of bone formation, direct bone formation (e.g. embryonic flat bones mandible and cranium), and endochondral bone formation (e. g. embryonic long bone development). Plays a role during fracture repair. Involved in BMP6 signaling path way (By similarity)
