靶点信息

研究背景	This gene encodes a member of an adapter protein family that binds to several tyrosine-phosphorylated p roteins. The product of this gene has several SH2 and SH3 domains (src-homology domains) and is involv ed in several signaling pathways, recruiting cytoplasmic proteins in the vicinity of tyrosine kinase through SH2-phosphotyrosine interaction. The N-terminal SH2 domain of this protein functions as a positive regul ator of transformation whereas the C-terminal SH3 domain functions as a negative regulator of transform ation. Two alternative transcripts encoding different isoforms with distinct biological activity have been d escribed.
