研究背景	The protein encoded by this gene is a member of the STAT protein family. In response to cytokines and gr owth factors, STAT family members are phosphorylated by the receptor associated kinases, and then for m homo- or heterodimers that translocate to the cell nucleus where they act as transcription activators. T his protein is activated through phosphorylation in response to various cytokines and growth factors inclu ding IFNs, EGF, IL5, IL6, HGF, LIF and BMP2. This protein mediates the expression of a variety of genes in response to cell stimuli, and thus plays a key role in many cellular processes such as cell growth and apo ptosis. The small GTPase Rac1 has been shown to bind and regulate the activity of this protein. PIAS3 pro tein is a specific inhibitor of this protein. Mutations in this gene are associated with infantile-onset multisy stem autoimmune disease and hyper-immunoglobulin E syndrome. Alternative splicing results in multiple transcript variants encoding distinct isoforms.
