靶点信息

研究背景	Transcription of protein-coding genes can be reconstituted on naked DNA with only the general transcript ion factors and RNA polymerase II. However, this minimal system cannot transcribe DNA packaged into c hromatin, indicating that accessory factors may facilitate access to DNA. One such factor, FACT (facilitate s chromatin transcription), interacts specifically with histones H2A/H2B to effect nucleosome disassembly and transcription elongation. FACT is composed of an 80 kDa subunit and a 140 kDa subunit; this gene en codes the 140 kDa subunit.
