研究背景	Neurofilaments are type IV intermediate filament heteropolymers composed of light, medium, and heavy chains. Neurofilaments comprise the axoskeleton and functionally maintain neuronal caliber. They may al so play a role in intracellular transport to axons and dendrites. This gene encodes the heavy neurofilame nt protein. This protein is commonly used as a biomarker of neuronal damage and susceptibility to amyot rophic lateral sclerosis (ALS) has been associated with mutations in this gene.
