| 研究背景 | The protein encoded by this gene coats lipid storage droplets in adipocytes, thereby protecting them until they can be broken down by hormone-sensitive lipase. The encoded protein is the major cAMP-dependent protein kinase substrate in adipocytes and, when unphosphorylated, may play a role in the inhibition of li polysis. Alternatively spliced transcript variants varying in the 5' UTR, but encoding the same protein, have been found for this gene. |
