靶点信息

研究背景	This gene encodes a serine/threonine protein kinase that plays an important role in cellular stress respon se. This kinase activates certain potassium, sodium, and chloride channels, suggesting an involvement in the regulation of processes such as cell survival, neuronal excitability, and renal sodium excretion. High l evels of expression of this gene may contribute to conditions such as hypertension and diabetic nephrop athy. Several alternatively spliced transcript variants encoding different isoforms have been noted for this gene.
