靶点信息

研究背景	This gene encodes an integral plasma membrane glycoprotein of the liver, islet beta cells, intestine, and kidney epithelium. The encoded protein mediates facilitated bidirectional glucose transport. Because of it s low affinity for glucose, it has been suggested as a glucose sensor. Mutations in this gene are associate d with susceptibility to diseases, including Fanconi-Bickel syndrome and noninsulin-dependent diabetes m ellitus (NIDDM). Alternative splicing results in multiple transcript variants of this gene.
