靶点信息

研究背景	The protein encoded by this gene is a carboxypeptidase and bears strong sequence similarity to serine c arboxypeptidases. Carboxypeptidases are a large class of proteases that act to cleave a single amino aci d from the carboxy termini of proteins or peptides. The exact function of this protein, however, has not be en determined. At least two alternatively spliced transcripts which encode the same protein have been o bserved.
