研究背景	Phosphoinositide 3-kinases (PI3Ks) phosphorylate inositol lipids and are involved in the immune respons e. The protein encoded by this gene is a class I catalytic subunit of PI3K. Like other class I catalytic subun its (p110-alpha p110-beta, and p110-delta), the encoded protein binds a p85 regulatory subunit to form P I3K. This gene is located in a commonly deleted segment of chromosome 7 previously identified in myeloi d leukemias. Several transcript variants encoding the same protein have been found for this gene.
