研究背景	The protein encoded by this gene is a pyrimidine catabolic enzyme and the initial and rate-limiting factor in the pathway of uracil and thymidine catabolism. Mutations in this gene result in dihydropyrimidine deh ydrogenase deficiency, an error in pyrimidine metabolism associated with thymine-uraciluria and an incre ased risk of toxicity in cancer patients receiving 5-fluorouracil chemotherapy. Two transcript variants enco ding different isoforms have been found for this gene.
