研究背景	This gene encodes a member of the TET family of RNA-binding proteins. The encoded protein plays a role in RNA polymerase II gene transcription as a component of a distinct subset of multi-subunit transcription initiation factor TFIID complexes. Translocations involving this gene play a role in acute leukemia and extr askeletal myxoid chondrosarcoma, and mutations in this gene may play a role in amyotrophic lateral scle rosis. Alternatively spliced transcript variants encoding multiple isoforms have been observed for this gen e.
