| 研究背景 | This gene encodes a member of the TNF-receptor superfamily. The encoded receptor has been shown to have increased expression upon T-cell activation, and it is thought to play a key role in dominant immuno logical self-tolerance maintained by CD25(+)CD4(+) regulatory T cells. Knockout studies in mice also sug gest the role of this receptor is in the regulation of CD3-driven T-cell activation and programmed cell deat h. Three alternatively spliced transcript variants of this gene encoding distinct isoforms have been report ed. |
