靶点信息

研究背景	This gene is a member of the WD40 repeat-containing gene family and shares sequence similarity with tr ansducin (beta)-like 1X-linked (TBL1X). The protein encoded by this gene is thought to be a component of both nuclear receptor corepressor (N-CoR) and histone deacetylase 3 (HDAC 3) complexes, and is require d for transcriptional activation by a variety of transcription factors. Mutations in these gene have been as sociated with some autism spectrum disorders, and one finding suggests that haploinsufficiency of this g ene may be a cause of intellectual disability with dysmorphism. Mutations in this gene as well as recurren t translocations involving this gene have also been observed in some tumors.
