靶点信息

研究背景	This gene encodes a death agonist that heterodimerizes with either agonist BAX or antagonist BCL2. The encoded protein is a member of the BCL-2 family of cell death regulators. It is a mediator of mitochondria l damage induced by caspase-8 (CASP8); CASP8 cleaves this encoded protein, and the COOH-terminal pa rt translocates to mitochondria where it triggers cytochrome c release. Multiple alternatively spliced trans cript variants have been found, but the full-length nature of some variants has not been defined.
