靶点信息

研究背景	Transcription factor that plays an essential role in anti-viral immunity. It mediates signaling by type I IFNs (IFN-alpha and IFN-beta. Following type I IFN binding to cell surface receptors, Jak kinases (TYK2 and JAK1 are activated, leading to tyrosine phosphorylation of STAT1 and STAT2. IRF9/ISGF3G associates with the phosphorylated STAT1:STAT2 dimer to form a complex termed ISGF3 transcription factor, that enters the nucleus. ISGF3 binds to the IFN stimulated response element (ISRE to activate the transcription of interferon stimulated genes, which drive the cell in an antiviral state.
