研究背景	This gene encodes a member of the apolipoprotein A1/A4/E family of proteins. This protein is involved in t he transport of lipoproteins in the blood. It binds to a specific liver and peripheral cell receptor, and is ess ential for the normal catabolism of triglyceride-rich lipoprotein constituents. Homozygous knockout mice f or this gene accumulate high levels of cholesterol in the blood and develop atherosclerosis. Different allel es of this gene have been associated with either increased risk or a protective effect for Alzheimer's dise ase in human patients. This gene maps to chromosome 7 in a cluster with the related apolipoprotein C1, C2 and C4 genes. [provided by RefSeq, Apr 2015]
