靶点信息

研究背景	This gene encodes an intracellular calcium-binding protein belonging to the troponin C superfamily. Mem bers of this protein family have six EF-hand domains which bind calcium. This protein plays a role in diver se cellular functions, including message targeting and intracellular calcium buffering. It also functions as a modulator of neuronal excitability, and is a diagnostic marker for some human diseases, including Hirsc hsprung disease and some cancers. Alternative splicing results in multiple transcript variants.
