靶点信息

研究背景	The protein encoded by this gene is a member of the Ser/Thr protein kinase family. This protein is a catal ytic subunit of the highly conserved protein kinase complex known as M-phase promoting factor (MPF), w hich is essential for G1/S and G2/M phase transitions of eukaryotic cell cycle. Mitotic cyclins stably associ ate with this protein and function as regulatory subunits. The kinase activity of this protein is controlled b y cyclin accumulation and destruction through the cell cycle. The phosphorylation and dephosphorylation of this protein also play important regulatory roles in cell cycle control. Alternatively spliced transcript var iants encoding different isoforms have been found for this gene. [provided by RefSeq, Mar 2009]
