靶点信息

研究背景	This gene encodes the pro-alpha1 chains of type III collagen, a fibrillar collagen that is found in extensible connective tissues such as skin, lung, uterus, intestine and the vascular system, frequently in association with type I collagen. Mutations in this gene are associated with Ehlers-Danlos syndrome types IV, and wit h aortic and arterial aneurysms. Two transcripts, resulting from the use of alternate polyadenylation signa ls, have been identified for this gene.
