靶点信息

研究背景	This gene encodes a member of the low-density lipoprotein receptor family of proteins. The encoded prep roprotein is proteolytically processed by furin to generate 515 kDa and 85 kDa subunits that form the ma ture receptor (PMID: 8546712). This receptor is involved in several cellular processes, including intracellul ar signaling, lipid homeostasis, and clearance of apoptotic cells. In addition, the encoded protein is neces sary for the alpha 2-macroglobulin-mediated clearance of secreted amyloid precursor protein and beta-a myloid, the main component of amyloid plaques found in Alzheimer patients. Expression of this gene dec reases with age and has been found to be lower than controls in brain tissue from Alzheimer's disease pa tients. [provided by RefSeq, Oct 2015]
