抗原信息

抗原信息	Recombinant fusion protein corresponding to Human TRIM25.

靶点信息

研究背景	The protein encoded by this gene is a member of the tripartite motif (TRIM) family. The TRIM motif includ es three zinc-binding domains, a RING, a B-box type 1 and a B-box type 2, and a coiled-coil region. The pr otein localizes to the cytoplasm. The presence of potential DNA-binding and dimerization-transactivation domains suggests that this protein may act as a transcription factor, similar to several other members of the TRIM family. Expression of the gene is upregulated in response to estrogen, and it is thought to media te estrogen actions in breast cancer as a primary response gene.
