抗原信息

抗原信息	Recombinant fusion protein corresponding to Human FKBP38.

靶点信息

研究背景	The protein encoded by this gene is a member of the immunophilin protein family, which play a role in im munoregulation and basic cellular processes involving protein folding and trafficking. Unlike the other me mbers of the family, this encoded protein does not seem to have PPIase/rotamase activity. It may have a role in neurons associated with memory function.
