抗原信息	Recombinant fusion protein corresponding to Human Lin28B.

靶点信息

研究背景	The protein encoded by this gene belongs to the lin-28 family, which is characterized by the presence of a cold-shock domain and a pair of CCHC zinc finger domains. This gene is highly expressed in testis, fetal liver, placenta, and in primary human tumors and cancer cell lines. It is negatively regulated by microRN As that target sites in the 3' UTR, and overexpression of this gene in primary tumors is linked to the repre ssion of let-7 family of microRNAs and derepression of let-7 targets, which facilitates cellular transformati on.
