靶点信息

研究背景	This gene is a member of the Period family of genes and is expressed in a circadian pattern in the suprac hiasmatic nucleus, the primary circadian pacemaker in the mammalian brain. Genes in this family encode components of the circadian rhythms of locomotor activity, metabolism, and behavior. This gene is upreg ulated by CLOCK/ARNTL heterodimers but then represses this upregulation in a feedback loop using PER/ CRY heterodimers to interact with CLOCK/ARNTL. Polymorphisms in this gene may increase the risk of get ting certain cancers and have been linked to sleep disorders.
