靶点信息

| | |
|-------|---|
| 研究背景 | This gene encodes a member of the basic-leucine zipper family and the AMP-dependent transcription factor or family. The encoded protein is localized to the endoplasmic reticulum and acts as a transcription factor activated by cyclic AMP stimulation. The encoded protein binds the cyclic AMP response element (CRE) and the box-B element and has been linked to acute inflammatory response, hepatocellular carcinoma, triglyceride metabolism, and hepcidin expression. Alternative splicing results in multiple transcript variants. |
