## 靶点信息

研究背景	Mitogen-activated protein kinase (MAPK) signaling cascades include MAPK or extracellular signal-regulate d kinase (ERK), MAPK kinase (MKK or MEK), and MAPK kinase kinase (MAPKKK or MEKK). MAPKK kinase/ME KK phosphorylates and activates its downstream protein kinase, MAPK kinase/MEK, which in turn activate s MAPK. The kinases of these signaling cascades are highly conserved, and homologs exist in yeast, Dros ophila, and mammalian cells. MAPKKK5 contains 1,374 amino acids with all 11 kinase subdomains. North ern blot analysis shows that MAPKKK5 transcript is abundantly expressed in human heart and pancreas. T he MAPKKK5 protein phosphorylates and activates MKK4 (aliases SERK1, MAPKK4) in vitro, and activates c-Jun N-terminal kinase (JNK)/stress-activated protein kinase (SAPK) during transient expression in COS an d 293 cells; MAPKKK5 does not activate MAPK/ERK.
