## 靶点信息

|      |  |
|------|--|
| 研究背景 | Adaptins are components of the adapter complexes which link clathrin to receptors in coated vesicles. Clathrin-associated protein complexes are believed to interact with the cytoplasmic tails of membrane proteins, leading to their selection and concentration. Binding of AP180 to clathrin triskelions induces their assembly into 60-70 nm coats (By similarity). |
