靶点信息

研究背景	The protein encoded by this gene is one of several nuclear proteins that are found in common among U1, U2, U4/U6, and U5 small ribonucleoprotein particles (snRNPs). These snRNPs are involved in pre-mRNA sp licing, and the encoded protein may also play a role in pre-mRNA splicing or snRNP structure. Autoantibo dies from patients with systemic lupus erythematosus frequently recognize epitopes on the encoded prot ein. Two transcript variants encoding different isoforms (B and B') have been found for this gene.
