靶点信息

研究背景	This gene encodes a member of the PIAS [protein inhibitor of activated STAT (signal transducer and activator of transcription)] family of transcriptional modulators. The protein functions as a SUMO (small ubiquitin-like modifier)-E3 ligase which catalyzes the covalent attachment of a SUMO protein to specific target s ubstrates. It directly binds to several transcription factors and either blocks or enhances their activity. Alt ernatively spliced transcript variants of this gene have been identified, but the full-length nature of some of these variants has not been determined.
