靶点信息

研究背景	This gene is a member of the lipoma HMGIC fusion partner (LHFP) gene family, which is a subset of the su perfamily of tetraspan transmembrane protein encoding genes. Mutations in one LHFP-like gene result in deafness in humans and mice, and a second LHFP-like gene is fused to a high-mobility group gene in a tr anslocation-associated lipoma. Alternatively spliced transcript variants have been found, but their biologi cal validity has not been determined.
