靶点信息

研究背景	This gene is a member of the Ras association domain family. It functions as a tumor suppressor, and is in activated in a variety of cancers. The encoded protein localizes to centrosomes and microtubules, and as sociates with the GTP-activated forms of Ras, Rap1, and several other Ras-like small GTPases. The protei n regulates lymphocyte adhesion and suppresses cell growth in response to activated Rap1 or Ras. Multip le transcript variants encoding different isoforms have been found for this gene.
