靶点信息

研究背景	The protein encoded by this gene is a member of neuron-specific calcium-binding proteins family found in the retina and brain. It is highly similar to human hippocalcin protein and nearly identical to the rat and mouse hippocalcin like-1 proteins. It may be involved in the calcium-dependent regulation of rhodopsin p hosphorylation and may be of relevance for neuronal signalling in the central nervous system. Several alt ernatively spliced transcript variants encoding the same protein have been found for this gene.
