靶点信息

研究背景	Encodes a putative nuclear Cys(2)His(2)-type zinc finger protein involved in H ⁺ and Al ³⁺ rhizotoxicity. In mutants exposed to aluminum stress, there is no induction of AtALMT1, an malate transporter known to be involved in the mediation of aluminum toxicity. Cell wall of the mutant is unstable in low pH medium (pH 4.5) in low Ca solution. This would mediate Ca-alleviation of low pH stress through pectin-Ca interaction.
基因ID	840339
基因名	STOP1
Swiss	Q9C8N5
别名	AtSTOP1; F7P12.7; F7P12_7; sensitive to proton rhizotoxicity 1
