靶点信息

研究背景	The protein encoded by this gene is a serine/threonine kinase and is part of some signal transduction cas cades, including the ERK and JNK kinase pathways as well as the NF-kappa-B pathway. The encoded prote in is activated by autophosphorylation and requires magnesium as a cofactor in phosphorylating other pr oteins. This protein has E3 ligase activity conferred by a plant homeodomain (PHD) in its N-terminus and phospho-kinase activity conferred by a kinase domain in its C-terminus.
