## 靶点信息

| | |

| 研究背景 | This gene encodes a Ser/Thr protein kinase that interacts with, and is activated by ERK1 and p38 mitogen -activated protein kinases, and thus may play a role in the response to environmental stress and cytokine s. This kinase may also regulate transcription by phosphorylating eIF4E via interaction with the C-termina l region of eIF4G. Alternatively spliced transcript variants have been noted for this gene. |
