## 靶点信息

研究背景	The B lymphocyte antigen receptor is a multimeric complex that includes the antigen-specific component , surface immunoglobulin (Ig). Surface Ig non-covalently associates with two other proteins, Ig-alpha and I g-beta, which are necessary for expression and function of the B-cell antigen receptor. This gene encodes the Ig-alpha protein of the B-cell antigen component. Alternatively spliced transcript variants encoding dif ferent isoforms have been described.
