靶点信息

研究背景	interleukin 1 beta (IL1B) Homo sapiens The protein encoded by this gene is a member of the interleukin 1 cytokine family. This cytokine is produced by activated macrophages as a proprotein , which is proteolytically processed to its active form by caspase 1 (CASP1/ICE) . This cytokine is an important mediator of the inflammatory response , and is involved in a variety of cellular activities , including cell proliferation , differentiation , and apoptosis. The induction of cyclooxygenase-2 (PTGS2/COX2) by this cytokine in the central nervous system (CNS) is found to contribute to inflammatory pain hypersensitivity. This gene and eight other interleukin 1 family genes form a cytokine gene cluster on chromosome 2
