研究背景	Transmembrane p24 trafficking protein 1 (TMED1) belongs to the TMED protein family, also known as the p24 family, and plays a part in protein vesicular trafficking. As the critical regulator of protein trafficking a long the secretory pathway, the TMED proteins influence the composition, structure, and function of the e ndoplasmic reticulum and the Golgi apparatus. Disruption of the secretory pathway could affect cell differ entiation and survival, ultimately resulting in disease
