靶点信息

研究背景	This gene encodes a member of the acid-sensing ion channel (ASIC) family of proteins , which are part of the degenerin/epithelial sodium channel (DEG/ENaC) superfamily. Members of the ASIC family are sensiti ve to amiloride and function in neurotransmission. The encoded proteins function in learning , pain transd uction , touch sensation , and development of memory and fear. Alternatively spliced transcript variants have been described.
